

The power to get things right. Faster. Easier. Automatically.

Prism Deploy®. Deploy anything to every local, mobile and remote Windows® PC or server across your entire organization — any time, from any place.

New and exclusive features in Prism Deploy®:

- **Internet-based Administration** – Prism Deploy makes managing your mobile workforce and widely distributed environments easy, and enables secure administration from any remote location with an Internet connection.
- **Mobile Workforce Support** – A new proxy server enables computers to securely communicate with your Prism Server enabling complete management of mobile systems.
- **Distribution Locations** – Enable any system with the Prism client to serve as a local repository for deploying packages and tasks to other managed systems in the same location.
- **Smart Update™** – Make a configuration rule once, then let Prism Deploy automatically group and target your systems for dynamic software deployment, updating, repair or removal. Replace repeated, time consuming scans with a set-and-forget process that continuously checks computer states and automatically performs the configuration tasks that you specify.
- **Prism Console** – Prism Deploy is administered through the Prism Console and delivers all the console's features, including customized views, simplified client installation and changing polling intervals.
- **Permissions Packaging**– Achieve better deployment reliability by graphically distributing security settings along with applications. Prism Deploy captures, packages and deploys applications that require changes to special registry and NTFS permissions for controlled, reliable, automated rollouts.
- **Package Authentication**– Make rollouts more secure by applying a digital signature to a package so clients only install authorized software. Ensure that only the administrators who are authorized can view and edit packages, making your entire deployment system safe.
- **Faster Windows Deployment** – Using innovative packaging and deployment technologies, Prism Deploy can install software on Windows Vista™ and other Windows systems up to five times faster than native installations.
- **64-Bit Packaging** – Prism Deploy packages all 64-bit software, including CAD and other large, complex applications, for fast, efficient deployment.
- **Windows Vista™ Support** – Prism Deploy works effortlessly with Windows Vista and other Windows operating systems, making it the perfect deployment solution for mixed Windows environments.
- **Dynamic Reporting**– Prism Deploy leverages a dynamic reporting engine that lets you customize reports the way you want them. And the flexible administrative console gives you real-time insight into managed systems based on whatever views you select.
- **Task Assignments**– Prism Deploy view panes in the Prism Console deliver easy task assignment. Just drag and drop tasks onto computers or groups and easily view all the assignments for selected computers or groups.
- **Security Roles**– Specify pre-defined roles for administrators and customize permissions of other roles to allow or deny access to specific functions in the Prism Console.
- **Checkpoint Restart**– Keep your deployments going while making the most efficient use of network bandwidth and local disk space. Unlike other solutions, Prism Deploy incrementally delivers and installs deployment packages, so it can resume distributions where they were interrupted without having to redeliver the entire deployment package.

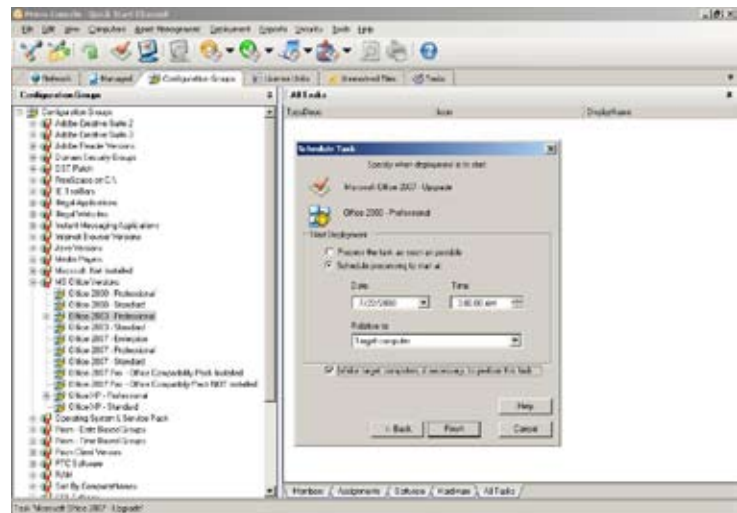

Software deployment as it should be.

Automated software deployment — and beyond.

Get Prism Deploy®.

Software deployment is a key component of computer configuration management that supports strategic initiatives like enhanced productivity, security, and compliance. Getting the right software to the right machines quickly and easily is a key to improving IT operational efficiency. You need a solution that helps you manage desktops, laptops and servers from the time they're provisioned until they're retired. A solution that automates desktop configuration management and simplifies the most complex processes. A solution that automatically resolves unauthorized configuration changes to ensure IT security and compliance. A solution that's easy to learn, easy to use and easy to implement.

You need **Prism Deploy®**.

The Prism Console is easily customized to support your established management and reporting processes.
